Sun, 11 Feb 2018 04:44:00 GMT the circulatory system pdf - THE CIRCULATORY SYSTEM and the LYMPHATIC SYSTEM. Most of the cells in the human body are not in direct contact with the external environment, so rely on the circulatory system to act as a transport service for them. Two fluids move through the circulatory system: blood and lymph.

1 Mon, 05 Feb 2018 20:07:00 GMT 1 FUNCTION OF THE CIRCULATORY SYSTEM (1) - The circulatory system is extremely important in sustaining life. Its proper functioning is responsible for the delivery of oxygen and nutrients to all cells, as well as the removal of carbon dioxide, waste products, maintenance of optimum pH, and the mobility of the elements, proteins and cells, of the immune system.

Sat, 03 Feb 2018 05:36:00 GMT Circulatory System - Integrative Biology - The circulatory system has three functions: 1. Transporting substances around the body. These include oxygen, glucose, carbon dioxide, nutrients, water and waste products. The circulatory system is described as a double system because it has two loops.

Thu, 25 Jan 2018 04:00:00 GMT 1. The Circulatory System - The Hereford Academy - The human circulatory system The blood vessels run throughout the body supplying oxygen to every cell in the body. They are made up of 3 types - arteries, veins and capillaries.

11. The human circulatory system Arteries are thick blood vessels that you can easily feel in the form of a pulse. They transport oxygenated blood to the cells.
